

SuperFrost® Plus
Instructions For Use

- Float your 2 to 5 micron thick tissue sections on a pre-heated distilled water bath. Do not add glue or subbing solution to the bath. The SuperFrost® Plus slide pre-treatment eliminates the need for these compounds. (Note: You may try substituting tap water for distilled water. However, if you begin losing tissue sections, use only distilled water.)
- Mount your tissue sections carefully. Tissue bonding begins quickly on Super-Frost® Plus slides.
- Dry slides completely at room temperature by vertically draining them before heating them in an oven.
