IsoMet® 1000 Precision Sectioning Saw

Designed for those who require consistency and versatility in cutting, the IsoMet 1000 is a fully enclosed, precision sectioning saw designed for cutting various types of material with minimal deformation, using blades ranging from 4"-7" [102-178mm]. The various compatible vising options allow for holding all types of sample shapes and sizes, allowing the user to section a wide variety of materials, brittle or ductile, including metals, composites, cements, laminates, plastics, electronics, and biomaterials.

1 Achieve Great Surface Quality

Control the feed rate with the gravity-fed arm and minimize deformation. Adjust the arm weight and counterweight to achieve the optimal combination of speed and surface quality.

2 Intuitive Control

Easily control the sample cut length with the manual wheel, which can be adjusted before or after vising. Control the cutting wheel speed and measurement scale using the membrane touch-pad panel.

3 Extensive Vising Options

The sample arm can hold a variety of compatible vises, and can also be set to stop at a specific adjustable height.

4 Easy Cleaning and Dressing

The coolant tank is easy to remove for sample retrieval and cleaning. It also has a manual dressing stick feed knob for dressing the blade.

The 11-2482 Fastener Chuck makes longitudinal bolt sections easy.

11-2484 Glass Slide Chuck holds petrographic samples for resectioning

The 11-2489 Mount Chuck is ideal for cutting small, cylindrical samples up to 1.5in [40mm] in diameter

Weight arm and micrometer controls are conveniently located outside the cutting compartment.

The 11-2182 Table Saw Attachment effectively sections or trims printed circuit boards or larger samples.
