

Reliability that drives what's next.

Discover hidden opportunities on your production floor

Join us for a Gemba walk

What is a Gemba walk?

A **Gemba walk** is a personalized, collaborative walk-through of your production floor guided by our specialized technical and field team to observe and experience the processes in place. In Japanese, “Gemba” means “the real place,” which refers to where the work truly happens.

Our team will join you on your production floor to observe, ask questions, and share ideas that could lead to improvements.

- **Customized solutions:** we may develop solutions that are specifically tailored to your facility’s unique challenges and opportunities to enable practical and effective improvements
- **Cost reduction:** we may identify and help reduce waste, which can lead to cost savings through more efficient use of resources and streamlined operations
- **Improved quality:** we may enhance product and service quality by addressing process inefficiencies and compliance with best practices

Why it matters

A fresh or second pair of eyes can often see what has been hiding in plain sight. A Gemba walk is a simple way to reveal these hidden potential improvements.

What to expect

- A walk-through of your operations led by our trained technical specialists
- A two-way conversation, not a checklist
- No charge and no strings attached

We may also bring specialists from our manufacturing site to offer deeper insights based on what we see—giving you access to the same experience we use to optimize our own production.

Ready to explore what is possible in your production flow?

Schedule a Gemba walk with a technical collaborator or specialist from Thermo Fisher Scientific to help improve your production capabilities.
