

Detect hazards faster. Respond safely.

Dual PID/FID gas detection

First responders and hazmat teams need the right equipment to assess the dangers of hazardous incidents on the spot. The Thermo Scientific™ TVA2020 Toxic Vapor Analyzer helps users detect unknown chemical vapors, fast. This crucial information can be of vital importance when dealing with emergency response situations, arson investigations, chemical spills, and accidents involving gasoline or diesel spills.

TVA2020 Toxic Vapor Analyzer

The rugged, lightweight, and intrinsically safe TVA2020 analyzer can help in key ways:

- Find sources of hazards
- Determine safe operational areas for hazard response teams
- Identify unknown chemical vapors
- Determine the effectiveness of post-incident remediation

Dual detection. Maximum confidence.

The TVA2020 analyzer provides both flame ionization detection (FID) and photo ionization detection (PID) in one device to rapidly determine the presence of toxic vapors, hydrocarbons and volatile organic compounds (VOCs). With two detection capabilities in a single easy-to-use device, this analyzer enables users to screen for the presence of concerning vapors in initial investigations as well as collect samples for in-depth laboratory analysis when needed.

Equip your team with confidence
Fast detection. Reliable results. Safer outcomes.
